

Billy Bishop Toronto City Airport (YTZ) Noise Abatement Procedures

As published in the Canada Flight Supplement (CFS), flight is to be avoided below 2500' ASL over Wards and Algonquin Islands as well as the lakeshore north of the airport unless directed by ATC. If ATC directs a flight over these specific areas, aircraft should be no lower than 1000' AGL (1250' ASL).

For reference, an excerpt from the Canada Flight Supplement is included below. All pilots flying to or from YTZ are required to review the valid CFS to ensure they have the most current information.
